

Deployment Guide

Docker Configurations, Environment Setup, and Directory Layouts

One Janitorial Operations Library

Version: v4.0.0

Release Date: June 23, 2026

Author: Antigravity Automated AI

Table of Contents

1. Overview & Purpose
2. Key Features & Blueprint
3. System Process Flow (Vector Diagram)
4. Step-by-Step Usage & Operations
5. Best Practices & Safety Guidelines
6. Troubleshooting & FAQ
7. Glossary & Appendix

1. Overview & Purpose

Setup manual for deploying the environment to production servers, including Docker configurations.

Covers container management, environment configurations, and reverse proxy settings.

Details absolute directory mapping configurations for persistent dataset file uploads.

2. Key Features & Blueprint

Multi-Container Docker configurations: Docker compose recipes for database and server setups.

Nginx Reverse Proxy: SSL configuration models to map routes securely.

Uploads Directory mount: Mounting storage volumes to store uploaded CSV/Excel documents safely.

3. System Process Flow

4. Step-by-Step Usage & Operations

Preparing deployment files: Edit environment files, configure network settings, and check configs.

Mounting Storage Volumes: Map local `~/uploads`` directory paths inside docker-compose configuration.

Launching system: Run compose commands to download dependencies and deploy containers.

5. Best Practices & Safety Guidelines

- Run unit tests before triggering deployment actions to check for script bugs.
- Configure database storage drives outside container files to preserve data across updates.
- Enforce file upload size constraints inside Nginx proxy files.

6. Troubleshooting & FAQ

Docker build failures: Clear build cache and ensure docker-desktop is running.

Permissions denied in uploads: Ensure that the Docker execution user has write access to the host path.

Nginx routing errors: Check configuration files syntax and restart reverse proxy service.

7. Glossary & Appendix

PM2: Production process runner.

Docker Compose: Multi-container orchestration tool.

Volume Mount: Shared storage mapping host path to container directory.
