

# API Reference Manual

REST Endpoints, WebSocket Channels, and Analytics Router Specifications

## One Janitorial Operations Library

Version: v4.0.0  
Release Date: June 23, 2026  
Author: Antigravity Automated AI

### Table of Contents

- 1. Overview & Purpose
- 2. Key Features & Blueprint
- 3. System Process Flow (Vector Diagram)
- 4. Step-by-Step Usage & Operations
- 5. Best Practices & Safety Guidelines
- 6. Troubleshooting & FAQ
- 7. Glossary & Appendix

### 1. Overview & Purpose

Developer reference for REST endpoints and WebSocket channels on the backend.

Provides developers with the specifications to connect client applications and third-party systems.

Documents the new Express endpoints registered under `/api/analytics` route.

### 2. Key Features & Blueprint

Secure Endpoints: Routes protected by JWT authentication headers.

Analytics REST APIs: Methods managing dataset uploads, preparation operations, and sharing link tokens.

Metrics API: Interface for retrieving service health, error rates, and system statuses.

### 3. System Process Flow

### 4. Step-by-Step Usage & Operations

Registering Client: Call auth endpoints to generate developer credentials.

Calling Analytics API: Authenticate client, build multipart/form-data, and POST to `/api/analytics/upload`.

Running requests: Setup authentication header to include bearer tokens, and send query calls.

### 5. Best Practices & Safety Guidelines

- Use secure HTTPS connections for all API calls to prevent data interception.
- Implement API request throttling to protect resources from request spikes.
- Re-authenticate immediately if JWT token expires to maintain connection stability.

### 6. Troubleshooting & FAQ

401 Unauthorized: Refresh active JWT token using authentication refresh endpoint.

429 Too Many Requests: Slow down request dispatcher loops and respect rate limits.

504 Gateway Timeout: Inspect service health parameters and ensure backend processes are active.

## 7. Glossary & Appendix

REST: Representational State Transfer.

WebSocket: Protocol for real-time bi-directional network communication.

Multipart Upload: File transfer schema splitting blocks in HTTP bodies.
