

File Processing Guide

PDF, Excel, CSV, Word, and OCR Node Operations

One Janitorial Operations Library

Version: v4.0.0

Release Date: June 23, 2026

Author: Antigravity Automated AI

Table of Contents

1. Overview & Purpose
2. Key Features & Blueprint
3. System Process Flow (Vector Diagram)
4. Step-by-Step Usage & Operations
5. Best Practices & Safety Guidelines
6. Troubleshooting & FAQ
7. Glossary & Appendix

1. Overview & Purpose

Detailed guide to running file upload, text extraction, invoice matching, and OCR nodes in workflows.

Ensures invoice details, resumes, and client orders are processed securely and structured automatically.

Explains how CSV Reader and Excel Reader nodes handle uploaded data sources.

2. Key Features & Blueprint

OCR Text Extractor: Core node analyzing scanned image files to extract text characters.

Excel Reader Node: Visual node parsing spreadsheet sheets and outputting JSON structures.

CSV Reader Node: Parser split-rendering comma-delimited data files.

3. System Process Flow

4. Step-by-Step Usage & Operations

Adding Parse Node: Wire file upload target output to PDF parser node inputs.

Configuring Reader Nodes: Drag CSV Reader, define delimiter parameters, and connect output to cleaner.

Testing Node Output: Click run node, upload test invoices, and check output variable lists.

5. Best Practices & Safety Guidelines

- Limit file sizes to 10MB per file to prevent execution memory exhaust errors.
- Create clean spreadsheet schemas to ensure column names align with mapping rules.
- Ensure headers are placed in the first row of CSV files to allow auto-detection.

6. Troubleshooting & FAQ

- Image text not parsed: Direct file to OCR node instead of basic text reader.
- CSV formatting errors: Ensure commas are not embedded in values without quotation wrapper characters.

Parsing timeout: Adjust maximum execution timeout values in workflow builder node settings.

7. Glossary & Appendix

OCR: Optical Character Recognition - Extracting text from images.

CSV: Comma-Separated Values - Standard spreadsheet file format.

Delimiters: Characters (commas, tabs) separating value fields.
