

Supabase Integration Guide

PostgreSQL Real-Time Database Replication & SQL Analytics Manual

One Janitorial Operations Library

Version: v4.0.0
Release Date: June 23, 2026
Author: Antigravity Automated AI

Table of Contents

- 1. Overview & Purpose
- 2. Key Features & Blueprint
- 3. System Process Flow (Vector Diagram)
- 4. Step-by-Step Usage & Operations
- 5. Best Practices & Safety Guidelines
- 6. Troubleshooting & FAQ
- 7. Glossary & Appendix

1. Overview & Purpose

Technical manual detailing PostgreSQL replication, schema mapping, and query execution on Supabase.

Enables real-time data sync for ticketing and user data, ensuring consistent database state across instances.

Provides direct Postgres data source capabilities inside the Analytics Center.

2. Key Features & Blueprint

PostgreSQL Sync Worker: Backend service that maps MongoDB document states to relational PostgreSQL tables.

Ad-hoc SQL Console: Console for administrators to run direct schema queries and review index health.

Supabase Query Node: Workflow node executing raw Postgres queries and parsing returned arrays.

3. System Process Flow

4. Step-by-Step Usage & Operations

Configuring Supabase Connection: Enter endpoint host credentials in system configuration panels.

Mapping Analytics Sources: Select Supabase tables inside the Data Catalog to register them for visualization widgets.

Executing Sync Health Checks: Select connection test tool and verify response times from PostgreSQL cluster.

5. Best Practices & Safety Guidelines

- Create matching indexes on target tables to optimize replication query performance.
- Back up Supabase tables configuration files to allow quick replication rebuilds.
- Limit SQL query outputs to avoid loading excessive rows into memory.

6. Troubleshooting & FAQ

- Replication lag: Open the sync manager and check active worker process threads.
- SQL Query timeouts: Verify syntax structures, add target row limits, and inspect index health.

Database connection drops: Confirm that firewall rules allow traffic from the host IP to the Supabase host.

7. Glossary & Appendix

PostgreSQL: The relational database hosted on Supabase.

Replication: The process of copying database tables in real-time.

Ad-hoc SQL: Direct query statements executed on the schema.
